Allowable Subject Matter

1. Claims 17-21 are allowed.
2. The following is an examiner's statement of reasons for allowance:
 1. As to claim 17, the prior arts of record do not anticipate or render obvious to one skilled in the art a liquid crystal display comprising various elements as claimed, more specifically an absorber arranged between the light source and the viewer for absorbing a component of the light having a wave-length which is not more than 440 nm and having a permeability for the component of the light having the wavelength of not more than 440 nm is smaller than a permeability for another component of the light having a wavelength which is not less than 450 nm.
 2. As to claim 20, the prior arts of record do not anticipate or render obvious to one skilled in the art a liquid crystal display comprising various elements as claimed, more specifically a color filter including a portion for transmitting therethrough a blue light, the portion including an agent for absorbing a component of the light having a wave-length which is not more than 440 nm and having a permeability for the component of wavelength of not more than 440 nm which is smaller than a permeability for another component of the light having a wavelength which is not less than 450 nm.
3. US 2001/0002146 (Komatsu) discloses a liquid crystal display comprising a light source for generating a light to be transmitted to the liquid crystal to the viewer. US 2001/0038425 (Lee) discloses a band-pass filter (absorber) between a light source and a viewer. However, Komatsu and Lee alone or in combination with any other references cited fail to teach or suggest a liquid crystal display comprising an absorber as claimed.
